

Study Name: Statistical vs. Moral Arguments Against the Death Penalty

Authors: Olivia Miske and Zachary Horne

Date: July 7, 2018

Exploratory or Confirmatory: Exploratory

Data will be collected from using Amazon's Mechanical Turk. We will collect data from 500 participants before analyzing the data. We determined our sample size by conducting a power analysis to detect a Cohen's d of .25 with 80% power. After data collection is complete, we will compute a Bayes Factor on the condition parameter (along with the condition \times question interaction). If $BF_{01} > 100$ or $< .01$ we will stop data collection. We will collect an additional 500 participants if $BF_{01} < 100$ and $> .01$.
